Proceed to (`#architecture`) for an in-depth look at the system design. `# Architecture`

More Random text to test this thing. `### Configuration`

Customize the project settings to suit your needs.

Basic Configuration

- **Setting Up Environment Variables**

Define the necessary environment variables:

```
“bash export PROJECT_ENV=production export PROJECT_PORT=8080
```

User Guide

Installation

This section provides detailed installation instructions for end-users.

Downloading the Installer

Running the Installer

- For Windows: Double-click the `.exe` file and follow the prompts.
- For macOS: Open the `.dmg` file and drag the application to the `Applications` folder.
- For Linux: Run the following commands:
“bash sudo dpkg -i project.deb `# For Debian-based systems` sudo rpm -i project.rpm `# For RPM-based systems`
